To run the piece:

1. This piece is gently generative both in terms of sound and vision (ie. it will never run exactly the same way twice) and is composed of html pages and animated gifs; the sound is a shockwave file authored in Director. ***Therefore it will only work as a projection from a PC***.

2. Copy the **entire folder** onto the local drive of the PC you're going to run the piece from (PC only; **it won't work on a Mac**)

3. The PC you're running it from needs to be fast enough to cope with running the scripted images and the scripted sound…

4. You must have the latest version of the Mozilla Firefox browser installed **http://www.getfirefox.net/**   & this must have the Adobe Shockwave plug-in, available from ***http://get.adobe.com/shockwave/***

5. Ensure screen savers are off and power save settings are set to always on and that anything which might give rise to a pop up is off

6. Ensure sound is on

7. Right click the file ***start.html*** and choose to ***open with*** Firefox

8. Choose **Full Screen** from the ***view*** menu in Firefox.

9. To leave the page right click at the top, choose **toggle fullscreen** then simply close the page
